27

Brian Gadge blows up this month. Apologies to Ken G. Smith, whose review of Cypsel appeared under Roland Henson's name last month, and thanks to Roland for printing this out in Ken's absence.

Editorial

MY conscience is salved - I'm up to-date (as of six weeks ago, in far as you the readers are concerned) with price tapes and the rest. IF there is anyone out there who thinks we owe them a tape, and who hasn't received it by now, please drop us a line (late the issue). No hurry.

Here I am at that time of the month again, wondering if our Dragon will make it out in time for the start of next month. This time we have the Colour Computer Convention coming along, and want to make sure that nobody has an excuse for not knowing about it. Cross fingers, get on the phone ... And will yours truly make it to Weston? Another of life's mysteries.

We have a phenomenal amount of software under review this month, plus new information from old friends Pean and Compusera. Something for everyone this Christmas. Start saving!

How to submit articles

The quality of the material we can publish in Dragon User each month will, to a very great extent, depend on the quality of the documents that you can make with your Dragon. The Dragon computer was launched on to the market with a powerful version of Basic, but with very poor documentation.

Articles which are submitted to Dragon User for publication should not be more than 1000 words long. All submissions should be typed. Please leave wide margins and a double space between each line. Programs should, whenever possible, be computer printed on plain white paper and be accompanied by a tape of the program.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your program/letter etc you must include a stamped addressed envelope.

messages, but it is loud. He is alive and well, because he is advertising in the For Sale section.

Sorry, jolly-go Dragoners, let's create some enthusiasm and miscegenating our friendly Dragon to rest let's become more positive about it further, because there is no other like the Old Dragon yet.

From one madhouse to another

With reference to Paul Gracie's *Dragon* written October 1988, I would like to make two points.

1) The HQUG is often mentioned in *Dragon* User but the editor's 'bitches', if on page 4 this month.

2) He asks about adventure programs with a different scenario: have a Radio Shack TRS-8000 game which runs on my *Dragon* 32, and is called *Madhouse*. It is a computer game (I looked up in a fantasy system and was to escape with the help of a wizard) of the staff and animals. I can't keep up the good work.

Voxie
Sunderland

Oh, we try to take it every two or three months. Talking strange scenarios, imagine arriving at Sunderland airport, late after losing your flight tickets over Garside. The pilot, a singing Dutch computer programmer, walks into the airport with a shield and quarterstaff slung over his shoulder, and a jolly man in tunic and a little beard gets the ship to open up and sail you some carriers. Eventually, after many adventures, you arrive at Volcan of Uppala Castle, where Gandalf tries to eject you first, being late, you have not yet done the transfer of the Phoenix.

If I suppose that doesn't count, because we're back to Tolkien again. Anyway, that's

what happened to me on my last hole, if anyone wants to write an Adventure about it. The north of Scotland and the Shetlands is one of the most impressive aerial panoramas I have ever seen. What a nice place to live, albeit a bit remote from the Hamster-Smith Ocean.

Missing: a crocodile of characters

ONCE again DU has brought us a clever program in the April issue, for *Dragon* electronic circuits, by D. A. Craig.

Unfortunately, as printed in this copy, anyway, the program suffers from what Beachcomber in *The Daily Express* called editorial Printer's Frolics. (To be fair, printers and typists are often blamed for errors in the original drafts.)

As printed, the following line numbers are longer than a 'magazine page' and have characters missing at the end of the line (or for second page line). To make matters worse, the text of the characters of the page line is printed together with the missing characters in brackets. When inserting the character, these brackets should of course be ignored.

Dragon will speak to order

Steven Orchard reports that he can supply voice synthesizers for the Dragon. The synthesizer, originally designed for the BBC Micro, has been adapted for use with the Dragon's primer port. The audio output can be used to drive either an amplifier, or headphones.

Steven confirms that the unit is easy to use from Basic or machine code, provides the user with comfort with any sound data statements. The package includes a cassette containing starter software and information about the unit.

The units are based on the SP0150-AL1 which uses the algorithm to synthesize speech, giving an unlimited vocabulary.

Units will arrive constructed to order, at a low time for component and construction when awaiting delivery. Units cost £15 each from Steven Orchard, 6 Marston Avenue, Ashford Park, Garbrooks, Twickenham, Norfolk IP25 5JW.

One disc runs out, one arrives

Pro-Tech Systems have announced that they are now

coming near to the end of their stock of Datasoft disc interface cartridges for the Dragon. These are available with disc drives from now on £115 (interface and untested drive) from £175 with fully packaged Datasoft drives.

On a more positive note, Pro-Tech have obtained a supply of Premier disc cartridge jobs which will be available for the first time to all builders. These can be supplied either with the original Delta 2000 chip, or the latest Phil Scott DragonDOS Plus PR Rom for Premier boards. This gives full compatibility with DragonDOS files and programs, as well as the corrections and improved facilities which Phil Scott has incorporated into his DragonDOS Plus rom.

Pro-Tech has also made arrangements to supply units fully made up and tested by

Datasoft Ltd. Details are available from Pro-Tech Systems (please send two local rate or second class stamps and your name and address in capital) at 25, Pelican Road, Premier Heath, Slingsgate PO22.

Power down

HARRY Whitehouse has decided to discontinue his acclaimed A1 Supermicro Power Supply, which has been an important replacement power unit for the Dragon.

"We can only produce the product in batches of fifty, and that just isn't viable any more. We have only had one order in recent months," says Harry.

H.C. Andersen Computer are now the only source stocking Dragon Data type power supplies, costing £25. For information and import details contact H.C. Andersen, Englandsvej, DK-2170, Kastrup, Denmark.

Since Jones

Orange explains DOS plus DELTA

Orange Software has obtained from Raaga Software a license to produce Raaga's games Ball Soccer and Manthegore on disc. In a letter to Dragon User earlier this year, Graham Smith of Orange Software said "We would really like to return how the author of a game that I really love a review copy of... it was in beautiful scrolling 3-D graphics, nothing short of a masterpiece." That game was Manthegore by John Foster, and Orange got their wish.

The games are available for DragonDOS and TandyDOS at £4.00 each, or both on one disc for £7.50, inclusive of postage. Please state which DOS is required. GUS was asked to see that the Ball Soccer label features a dragon wearing one of Raaga's Minerva's T1000, or, better, Cassette versions of the game are available from Raaga Software, 14 The Oval, Fitch Park, Sheffield S10 6SF.

Orange also has a new music control program, Composer II, in the pipeline. The authors have been incorporating suggestions made by Dragon User reviewer Ken Smith on a previous version, and the production version is now ready for review. "We will be bringing out a T1.00 as well as it is one of those fairly little utilities that people might buy

as long as the price is not too high. Like so many other items of software for the Dragon, the price just cannot do justice to the amount of work the author has put into it," says Graham Smith of Orange. Composer II allows the user to modify songs compiled with the official's popular program Composer.

Orange has had enquiries about Phil Scott's DOSplus 4.0 and DOSplus DELTA which has led them to clarify the purpose of DOSplus.

"It would seem that people are expecting DOSplus DELTA to do slightly more than it actually does," says Graham Smith. "It's not some sort of DragonDOS/DeltaDOS software converter. We are talking about two different versions of the same operating system. DOSplus 4.0 is a direct replacement chip for the Dragon Data DOS chip (or any of the clones), and gives several enhanced features and some totally new facilities. DOSplus DELTA gives the same facilities but has been specially developed so that it will directly replace the DeltaDOS chip in a DeltaDOS cartridge. The DragonDOS and DeltaDOS cartridges use different controller chips and therefore the other operating system has to be different in each case.

"DOSplus DELTA has been

developed to allow anyone with a DeltaDOS cartridge to have access to the software developed for DragonDOS users, without the expense of buying a DragonDOS cartridge. With DOSplus DELTA installed you will not be able to read your DeltaDOS discs, but you can read DragonDOS discs (cannot do both at once, but with a simple hardware modification you can DeltaDOS cartridge it is possible to have both chips in the same cartridge with an external safety snap between them. This would mean that you would lose the use of the snap between the cartridge, which is normally reserved for the optional utility chips, the DOS 6.0 or 7.00. All. You cannot switch between the two chips while a program is running, so it is necessary to RESET the Dragon after switching, but with a bit of programming it is possible to preserve any data stored in the memory as long as it does not occupy the DOS workspace, which is in a different area for each DOS.

"I personally would prefer to switch the Dragon off when switching from one DOS to the other, so I do not recommend that last option. We do have some software under development which will read DeltaDOS programs, while running DragonDOS (or DOSplus).

This might prove useful to future DOSplus DELTA users, or even DragonDOS users who have trouble with DeltaDOS.

"DeltaDOS users see it as the answer to all their prayers, but manage to miss the important bit about not being able to read DeltaDOS discs. DOSplus DELTA gives you DragonDOS facilities from a DeltaDOS cartridge - effectively it is DOSplus 4.0 in Delta cartridge format."

Phil Scott is now working on a new DOS which, says Graham, could be called "CosplayTandy" or perhaps "Cosplay". This is designed to fit into a DragonDOS cartridge to allow it to be plugged into a Tandy CoCo. This would be useful for people who can built a Dragon and a Tandy, but only own the DragonDOS cartridge.

They would be able to use the disc drive to store their Tandy programs. Programs written on the Dragon could be loaded onto the Tandy, but would only run if they were already Tandy compatible. Basic programs would have to be converted to Tandy format, and vice versa for the Dragon.

Enquiries to Orange Software, The Garth, Star Road, Nant-y-Celyn, Aberystwyth, Gwynedd NP23 5AP.

Expert's Arcade Arena

Written: 'The Expert' at Dragon User
48 Alexandra Road
Hounslow, Middlesex TW9 4HP

BEFORE you start, let me get one thing straight. I am a goldfish. Any attempt to categorise me as anything other than Dudley the Incredible Gamesplaying Goldfish will be treated with the utmost contempt. How might you ask, does a goldfish play computer games? That, to you mortals, will be one of the great unanswered questions of life, just like 'What really did happen to Buckle B&T' and 'Was the Cascade Cassette 50 really written by 50 dyslexic monkeys?'

Down to the serious stuff - many of you will of course have read the review of the very wonderful Mandragore by John Foster of Kauga Software in the August Dragon User (here, in another Dudley T.O.G. bowl-smashing exclusive, I can reveal the latest from Kauga-Balldown.) This was exclusive to goldfishes at the time of writing. Unfortunately, most goldfish die before the time a computer game is possessed of, and the time the monthly rag hits the streets. - Ed.) This one is not written by J.P. Horwell, but by Stewart Orchard, and it promises to be every bit as good as Mandragore. Basically, Balldown is Break-Out with brass knobs and curly bits.

Gameplay is the same - bounce ball off bar and hit bricks to destroy them. But there the similarity ends. The first of the

brass knobs is that there will be over 30 screens with different brick patterns, including live hit bricks that must be cracked first, and indestructible bricks.

But most wonderful of all, power icons drop from the sky, which when collected can give anything from a next time laser to invincible bricks, to a bit speed turbo-charge.

And the curly bits, for a start, there will be the Dragon's first ever curly message on a loading screen, and also a little graphic loading screen. All this for just 14. Can it really be that good? It's due out in September, so look out for the DU review.

Speaking of reviews, those of you who avidly devour DU's reviews will have noticed a recent influx of high marks. Utopia, Lucifer's Kingdom, Mandragore, all hitting maximum. Could it be, I hear you cry, that DU's reviewers have gone soft? Certainly not, it's just that they don't make 'em like they used to, eh, Cascade? This latest rash of genuinely good games is a definite sign that at last the Dragon games industry is back on its feet. The likes of Microtest, Blity and Quickstars was obviously nearly disastrous, but we've proved we can survive without these relative giants. In my opinion, since the departure of the last 'boggles', there has

been a general improvement in the standard of software. Programmers can no longer hide behind a shield of hype and publicity (remember Fireforce?), but really have to produce the goods. And with all the companies' commission, games prices are coming down at last. All good news for programmers and games players alike. Dragon games are produced more for enjoyment and devotion to our little plastic friend than for big profits, and as a result we are better off, I say.

It's a while since we've seen any good entertainment programs in DU. Personally I don't type many in anyway, because I usually get PC error in 445, or something, and because I have five. This generally results in me wanting to do something impossible to my Dragon, especially now it's so difficult to get spare parts. But now those days are over, because I, Dudley T.O.G., can introduce you Dragon Shorts. Yes, The Expert will accept any programs that do interesting things, as long as they are no more than 8 lines long. To get you started, here is my magnum opus, my life's work at a keyboard. I'm not going to give it a title, I'm sure you will spring to mind when you run it.

```
10:G="E"  
20:For G = 1 to 5: ON(STR$(G)): PLAY  
"TROUBLE" + G;:G = NEXT G
```

For those of you with no keyboard, fingers or brain, or if you just can't face typing in this colossal masterpiece, send me £3 and a blank cassette and I'll send you a copy and sympathy.

Last but not least, hi-scores. Let's hear what you can really do. The best might well see their names in lights (well, black ink, anyway).

One exception: no Chuckle Egg scores. If the Editor wants to print Chuckle Egg scores, that's her problem.

That's it, then. Send in any hints, tips, shorts and hi-scores. Until then, Dudley is closing this column for the month. Thank you for reading! (xxxxxxxxxx)

Don't forget . . .

The **ALTERNATIVE MEDIA** section at the Aspen Film Sports & Leisure Center on Saturday 13 November, and the **COLLOQUIALISM FOR CONTEMPORARY** at the Rocco Hotel, Lower Church Hill, Windsor, Surrey on Sunday 4 December.

With our great value hardware and software:

BASIC 40 Embedded Basic **074-100**
 Print job status reports with standard print/communications
 strings (256 bytes) embedded character sets, variable
 string length, character set, repeating/stop etc. (see 074-100
 manual for details)

HELPFULITY **CLIM**
 Change your character and mood. Great thing.
 But, as a rule, it's not the best way to manage.

Decisions, decisions

David Rothery decides to save money by doing a pricey task on the Dragon

DECISIONS, decisions: modern life seems full of them. They may be extremely complex business decisions, or very simple ones, such as shall I have a pleasant night out with friends, or shall I wallpaper the ceiling?

The computer is good at making decisions, and will look at the information it is given dispassionately, whereas we humans tend to get emotionally involved. Those people who are stupid enough to have thrown away their Dragons and bought a PC will have seen adverts for programs to help in making decisions selling at £80 to £350 a throw which do little more than the following simple, short program. I have deliberately done little by way of screen formatting, and have restricted the number of factors involved in the decisions to one screenful. I don't want to deprive you of the pleasure of tailoring the information to suit your own needs! Likewise, it is simple enough to save the information in a serial file or tape or disc, whichever you have. Just save/load the variables N, M, H(4) and use loops for values of OP(4) from X=1 to N, FA(4) and FA(3) from Y=1 to M and a counterloop Z=1 to H and Y+1 to M for CP(X,Y). Feel free to do your own modifications and improvements; you will find this more interesting than just typing out the listing, although it will work satisfactorily as it is.

The easiest way to exploit its use is by using a common example such as where to go for next year's holiday. Enter HOLIDAYS when asked what you are deciding between. You are then asked how many holidays you are considering, answer any number up to 14. You then enter each hol-

iday in turn. Let us suppose they are:

1. Stop at home
2. Drive to small town in Italy
3. Fly to Majorca
4. Fly to Australia
5. X & G in Scotland
6. Small town in Blackpool

Now you must enter the number of factors affecting you decision, and say what they are. For example:

1. Cost -8
2. Weather +9
3. Travel time -6
4. Crowds -4
5. Entertainment +3
6. Scenery +7
7. Change of customs etc +5
8. Flightrate +2
9. Food +6

The numbers on the right are input after you have entered the names of all the factors, in response to a series of prompts. They represent how important each factor is to you, on a scale of 0-10. 0 means you don't care, and a negative sign means you consider this factor a disadvantage. After each set of inputs you have the opportunity to confirm or alter the information - just pressing Enter is a shorter way of confirming that you wish to go to the next part of the program.

Now you are asked how each of your options rates for each factor input. For example, how does each holiday rate for cost, weather, etc? Obviously, for cost, staying at home rates zero, and flying to Australia

may merit a 10. Don't use negative numbers, as you have already indicated that cost is a disadvantage. Obviously, Italy and Majorca will rate highly for weather, but Blackpool and Majorca may score high on the negative factor of crowds. Enter your own opinions.

After you have confirmed everything, the computer will give a weighted total for each holiday, taking into account all your opinions. These will be displayed either on screen or printed out, in order of merit. You can thus immediately see your best, and worst, options.

The program should be easy to follow. An array F(4) is used to store the names of the 14 factors affecting choice, with the ratings for each stored in FA(M). Similarly CP(4) stores the names of the N options and the two dimensional array CP(N,M) stores the ratings of each factor for each option. Since the zero subscripted arrays CP(0,M) etc have not been used, they are used as temporary variables in the calculation and sort. In the calculation, for each option the factors are multiplied by their respective negative or positive weightings and all added together. The sort is a simple bubble sort which is fast enough for such a small number of options.

The program could have many uses, for example in weighting up several possible job offers (if you have the choice) or in deciding a course of action in running a business - or even deciding which TV program to watch. As they say the possibilities are endless. Have fun.

By the way, I don't take my Dragon up on its suggestion that I simply stay at home!

DRAGONSWORD!

Paul Grade takes a monthly stab at setting the world to rights

All the time I'm writing this the Weston show is still a future event! But by the time you read this the show may be history if July well hope not. Paul, or Andrew will get his act on the back, but I see your point - it's, I think, either the Dragon and CoCo event at the year or the Pops of 1989. Either way, it's a fair bet that less than 10% of Dragon owners will have attended or done anything at all to help make it a success, so what happened to the other 90%? It has always been the same story at shows, so I don't need a spreadsheet or even a crystal ball (far more reliable) to work out the maximum number of owners attending. This apparent apathy, if that's that's what it is, applies to just about everything in the Dragon scene, whether it happens to be shows, user groups, magazines, software and hardware. By turning a magazine, it doesn't matter whether it's a full-scale commercial one or a local group newsletter, and see how many people bother to send you anything useful for publication... if you're lucky it may be as much as 10% of your subscribers, but usually far less than that. By writing a program for newspapers how many of those people who are constantly whining that "there's no software for the Dragon" actually buy it. By designing something cheap and useful in the hardware line, but so it while you're still at school because you're designing for your pension before you've sold enough units to cover your costs.

The entire Dragon scene depends on the efforts of about thirty people who are actually prepared to do anything, and a few hundred more who are willing to attend shows, subscribe to magazines, join groups, etc., for all practical purposes the remainder might as well not exist at all, because the only time anyone hears from them is when their machine goes wrong or they decide that they want something precious for them (and when it is they usually don't want it after all). I know that everyone blames Dragon Data for losing marketing, and CSC for getting cold feet, but even in the legendary 'good old days' Dragon owners never gave their

machine the sort of praise and publicity that, for example, BBC and Spectrum owners did (remember the BBC's?, and virtually went around apologising for not having bought a VCR or an Atari 400).

My accident or design they bought what was the best home machine of its time, one that can still give a lot of the current machines a good run for their money six years later, but whereas most of the other machines I've mentioned were almost worshipped by their owners, the Dragon types generally crept quietly away to play invasion Revenge. Of course, the other machines got a lot more media hype, and in the case of the BBC a very suspect 'educational' status on the strength of an even more suspect contract, but so what, that shouldn't have stopped Dragon owners spreading the word, so what's the reason? Are Dragon owners really such shy, retiring types? Is it that they don't want to make everyone else jealous, or is it that a lot of them are just too damned lazy to do anything but mope, even when it would be in their own interest? When the Dragon finally dies, it won't be the fault of Dragon Data, or even because the Dragon has been out-classed.

Yes, I know I'm always having gone at you, and if you are one of those who attend all the shows you can, subscribe to Dragon User instead of borrowing a micro-cassette's copy, write articles for DU or your group newsletter, and occasionally send in useful snippets of programs that you've written, or even try to market them, then maybe you will accept my (Paul, the computer's internal a-rse of garbage here. What were you thinking?) most profound apologies.

OK, end of lecture. Either you get the message and do something about it, or you don't. Let's change the subject anyway. Depending on the result of the Weston show there's a distinct possibility that MDUX may run a London & South-East Dragon and CoCo type show sometime around March/April 1989. If there's enough interest demonstrated at Weston I think we can do so

without making a loss, even taking into account the cost of suitable premises in this part of the country. Of course, if Weston flops, then there isn't much point, is there, after all, what chance is in his right mind to going to three good money after last? At the moment all the signs point to Weston being a success, in which case you can take it as being definite that there will be a London area show next year. The Dragon user-base is decreasing as more people switch to other machines (regardless of whether they need them or not), and at the current rate of decline I very much doubt that by 1990 it will be possible to run a Dragon show at any location and still make even, so next year may well see the last of the Dragon/CoCo specific shows, in which case let's make sure that they are good ones! If the Dragon is going to finally become commercially dead let's give it a wacker to remember!

Of course, that won't mean that the Dragon itself will be any less useful than it is now, it just means that Dragon owners will have to work a bit harder to keep things interesting. Nobody can make a living out of selling Dragon/CoCo material exclusively if the quality of the software is good enough, and enough people are buying it, they can still afford to make it for us, even if most of their profit has to come from other sources. Really it is up to you (yes, YOU) to keep things going both by writing material and by buying it, and the fewer Dragon owners there are, the more necessary it becomes for those that remain to really put something into keeping the software alive. Of course, there's always the other big problem, how are the distributors to sell the software you've written for them, and how are you to know what software is available for you to buy? Simple, it's just a matter of advertising, but if you were a distributor trying to sell Dragon programs, where would you advertise. Advertising in the mainstream computer publications costs a medium sized fortune, and it's unlikely that you'd sell enough material to cover the cost, so that leaves the Dragon specific publications... like

Dragon User and Update. Yes, I know there are others, but think that their publishers would be the first to admit that they simply don't have enough circulation figures to make an appreciable difference to sales. Dragon User needs commercial advertising to stay in business, because typesetting, printing, and distributing a commercial magazine is an expensive business, and subscription charges just don't provide enough income to cover expenses, but for a distributor to advertise in DU User he has to be reasonably sure that the ad will sell enough material to cover its cost, which again means that if you aren't buying now there won't be any programs advertised in Update (don't depend on advertising revenue to cover running costs because overheads are much lower and we can just about manage on what we gain subscriptions, but our circulation is lower than that of DU so although Update ads cost less they aren't as useful to a potential advertiser, so effectively it all comes back to you again... the more subscribers there are to Dragon User, and the more members there are in the MDUX, the better the potential market for advertisers, which means they can sell more material, and you get the benefit of having more on offer, and of course if you are writing software (you are, aren't you?), you get more cash too! It is all very simple when you stop to think about it, the more you are willing to put into Dragon ownership, the more you will get out of it, and everyone benefits. Sit around waiting for someone else to do everything and the whole thing simply dies leaving you with no support for your machine at all, so not buying, and not subscribing is really a false economy.

Sorry it's all been a bit serious this month, but to be honest the Dragon scene has been rather depressing, and if someone out there doesn't wake up to the fact that they need to do something about it, things aren't going to improve. Hopefully there will be something a little more cheerful to say by the time I type up the next lot.

THE DRAGON USERS' HANDBOOK

After three months of development, Now Era Publications are proud to present THE DRAGON INDEX! HANDBOOK - the indispensable money saving guide to today's Dragon market. Listing all known software/hardware/publications, starting the price, the source, and where applicable, the rating.

From books to magazines, from games to hardware, from user groups to utilities, if it has ever been produced for the Dragon and currently available, we've covered it.

This invaluable source of reference
is now available for only : £1.75

Crossword

Please get your answers in to Oregon User-Counselor Department by the end of the month in the form below.

The thirteenth and last Dragon Crossword pulls on its long red battle hat, tightens up its broad black belt and strikes a final pose in its robust wallies.

"This boy he," it rumbles, "What have I got in my sack?" Out pops the eleven-foot Dragon Crossword. "The sack!" It japes, of course. No sack but a metamorphosis we assess. From next month, the Dragon Crossword becomes the Dragon Word-search (file ran-out of software.) But what else is in that sack? Looks to be the likes of Marshall of Swines, who would like *Indoor Football* or *Star Polype* and Brian Thomas of Ohio Upsilon, who wants to know what happened to the lion he saw in the sack?

© 2004 Blackwell Publishing Ltd *Journal of Internal Medicine* 255: 105–112

Will ALSC HAVE Gordon Wright of Dunblaine and Paul Hanson of Broseley for the Tenth Crossword. 'You're all pulling me round'

9. You must be kind to pull these off.
10. Prudette and Cinderella girls in the song (5,3,3,1)
11. Reaps some unusual gifts (5)
12. Can they be found on a one-horned open sleigh? (4,6)
13. Use it to steal a Christmas kiss (5)
14. Means real making decorations (5)
15. After dinner, burn it and eat it (4,2)
16. Give 'em the money before they associate you again!
17. Jumble can last us a year until he comes again
18. Let the girls be under the North Star (5)
19. Cockney boys - kind of a chimney? (5,4)
20. Host for your presents? (4,6)
21. Rudolph's coming - sounds like you should kill the chimney? (5,4)

TRAGON QUIZ

Ray Terry and Charlie Finkbeiner

No software titles this month, instead all the answers have a festive flavor!

Jolly good barrels

Program: North Sea Action
Supplier: Orange Software,
The Girth, Star Road, Heath-
cote, Aberystwyth, Gwent
NP23 5BP
Price: £2.00 cassette or disc

This game was written by a Norwegian, Olei Hovland, who obviously thinks that "North Sea jolly good fellow", no less, and this has proved to be a very difficult game to play. Originally described to me as a Pacman-type game, the screen during the advertising sheet makes it look like that. As soon as you start playing it, however, you will realise how different it is. Played with a joystick - a switched type is best although control is still very difficult to begin with - you start at the top of the screen and move a pipeline through a maze of tunnels in order as much as possible by passing over dots, and collecting barrels which give you even more points, 2500 for a full spot and 200 for a barrel.

As you move a solid line is left behind you representing the pipeline and you must take care that none of the marauding oil-monsters, which move in both directions along some of the horizontal passages, touch any part of the line. If they do the message "Ole! Wiegått!" appears, which makes me think this writer liked Megasoft. To withdraw the pipeline all you need to do is press the fire button and it retracts its steps almost immediately. The oil in the upper part of the screen is very easy to reach but it becomes increasingly harder the lower down the screen you need to travel to as you have to sidestep out for the monsters at the top as well as those at the bottom. If you're moving along one of the passages you can see right there how it will end (and immediately behind it) but you still have to be careful in case a monster is from behind. Only four lives are given to you and you virtually have to surrender at least one of these to clear the very bottom of the screen. It took many hours of play before I was able to complete the first screen and I was then faced with the message

"Meldene. No continue with a harder level."

After this it took many sessions at this game before I could get any further but I have now been able to get as far as the fourth screen, and although they are all different they do not appear to get greatly harder. This game is addictive, however, and no doubt I will spend many more hours trying to get some better and by many different tactics to beat those monsters. Luckily there is no time limit so you can take away by yourself if you like as long as you like. The graphics tend to annoy the rest of the family who are queuing up to have a go. You get another life for every 10,000 points but I have only achieved this on a couple of occasions and, as yet, I haven't been able to manufacture extra lives or move onto other screens by default means. All in all a well put together game, although the graphics are not outstanding, especially the monsters, but at that price it is well worth it. I especially liked the way you type symbols to tell you how many lives remain.

Mike Scott

Breakthrough for the Breakouts

Program: Bad Digger
Supplier: Kluge Software, 14 The Oval, Pitt-Park, St Albans, SG 8PP
Price: £4 envelope. Also available on disk from Orange Software.

When I first received this game I thought that it was going to be just like all the other versions of Breakout that I have seen and prepared myself for a long session with a game I do not like. The version I received was on tape but I loaded surprisingly quickly having loaded it. I found that there was a joystick option and I do not normally like keyboard games. This game

surprised me on all counts. It is not like any other Breakout game and is very easy to operate using the keyboard.

When you play the first screen you are faced with a wall of 8 rows of fifteen bricks in each row. The bottom row contains normal bricks which disappear when you hit them but the back row only cracks when they are first hit and have to be struck again before they are destroyed. When half the bricks are hit the ball speeds up and it would therefore virtually be impossible were it not for the help you can obtain from a wall that drops down from the wall as you hit some of the bricks. These take the form of extra lives, power shots (enabling you to fire right through the wall), lasers, down arrows (lower the ball down), up arrows (opening a door for

self. Suffice it to say that most people who have seen this game say this is the best screen. I have played every screen and they are all as clever as the others although some do look very difficult at first glance. Up to now I have only managed to reach the eighth screen when I have started at the beginning and cannot seem myself getting much further but would love to hear from anyone who reaches the final screen without cheating. The game is not difficult, it is as I have said the best.

Flying backwards and forwards across the top of the screen and had to turn off the game and wait. This also occurred on accident at the bottom (as I was trying to hit the ball with the laser) my weight. I am not happy with the selection

"Only four lives are given, and you have to surrender at least one to clear the bottom of the screen."

you to pass through to the next screen). I passed up the ball if it didn't pass (and my favourite which enables you to catch the ball. Some of the scenery last for a few seconds but others continue until you lose a life by missing the ball. You are allowed two different at one time but some combinations are not possible, such as catching a ball and firing a laser.

Some of the very difficult parts of the game are when you are trying to destroy the wall and at other times you do not want to collect them but cannot avoid them. Points are awarded for these extra and also for hitting the bricks. When you have removed all the bricks you move on to another Breakout screen although they are all designed differently and have the double break in different places. There are also solid walls on some screens which cannot be hit and a variety of techniques are needed for each set of bricks. Should you manage to complete these screens without losing your four lives you are then presented with a no lives left you'll let you find out for your-

routine of the ball hitting the ball as it is a very common occurrence that the ball passes through the ball many times before playing ends, but I do not think so. Finally on several screens the ball passes through solid walls, although this may be an intentional part of the program put in by the author. Incidentally this is the first all machine code program written by Stewart Orchard and I certainly look forward to many more programs from him. I have become more than slightly addicted to this game and have enjoyed playing it despite having to load from cassette and the alternative to complaints. I do not hesitate to award this program a Dragons and would certainly recommend it as a good buy even if you do not normally like Breakout games.

Flex bounces back from Orange

Programs Orange FLEX 1

Supplier: Orange Software,
The Garth, Star Road, Nant-y-Garri, Abergeirny, Gwent NP23 8D.

Price: £5.00

If it were three days to new software released for the Dragon/FLEX system and I was intrigued by this disc, Orange Software have once again produced excellent value for money in that this is a compilation of ten discs formerly from Microvision, G-Mac and Flex Pack-1 which originally retailed at three times the price.

So what do you get for your five? A great deal. The Flex Pack Utilities and believe written by Roy Coates who has already produced excellent articles in Flex (June Flex Revisited, September 1988 and Dragon Plus, November, January 1989), and his instructions come on the disc. The instructions for each utility program are included together with the extension files. Their files are in "OTF" format and may be viewed on screen or sent to the printer if a hardcopy is required.

The first utility is a program called EDITFONT, and is a usual utility which enabled the user to select different printer modes without the usual fiddling with control codes to the printer. The utility lies in the default utility command space within the Flex Operating System and when called with a simple keyboard command displays a menu of available printer modes which may be selected by entering the number displayed against the desired option. The program is written for the basic stage of printers and pressing the F key (F87) will cause the loss of the alphabet to be sent to the printer so that the effect of the various options may be seen. The options are:

- 1) Return to Default Mode
- 2) Alternative Character font
- 3) Condensed Mode
- 4) Wide Characters
- 5) Expanded/Condensed Characters
- 6) Pica Characters
- 7) Double Strike Mode
- 8) Enlarged Mode
- 9) Return to Flex

The second utility is a DIARY routine which allows the user to create a text file containing entries in the usual manner. When the program is called the file will be created and any lines found to contain the current date will be displayed at the terminal. If the DIARY command is inserted into the FLEX start-up file then the diary checking becomes automatic on power-up. The comprehensive instructions detail two methods of invoking the diary routine and how new information may be input and rejected or information deleted if required.

The next utility is a HELP facility which has been designed to allow access to information stored within a file by simply typing the heading that the required detail is associated with. The facility comprises five, the first being the help program itself and the second being the text file containing the desired information. This information is stored in the HELP file as a heading followed immediately by the information itself which is supported by a number of links.

There are two methods of invoking the HELP routine, either call for the information under a heading, or display a list of all headings found. I found this little feature particularly helpful in storing the details of those small 'cheat' instructions and other commands that are either written in a book or on bits of paper which are then promptly lost.

The fourth utility on the disc comprises two small programs for screen dumps for Epson compatible printers. They perform either a single or double screen dump respectively and are only suitable for graphics modes PMODE 3 and PMODE 4. Also contained within both alternatives is an X routine. This turned out to be rather dull in that it is a replacement for the TBC utility BCUT, which will delete all files having a common specified extension unless they have been given a file protection such as PROT.

The fifth item on the disc is a 'personal utility' which is of specific use to operators who use their systems daily. The program will

search the line of the directory for any occurrence of a keyword entered by the user and will then display any lines containing the word required by the user. The program is easily adapted to form a simple data retrieval package.

The sixth utility is a handy utility at all and is called COORDS, and indeed turned out to be a 'fortune teller' which gave a whole series of system lines and sayings which one would find in the wide variety of monthly calendar I personally find little use for this routine, but perhaps it could be coupled to the DIARY used earlier. There thing a close call to add a little lighter relief when reviewing the disc.

Utility seven turned out to be a Quick Test Processor (QTP) which is a simple test processor program allowing the most common forms of test format to be achieved with a few lines. An ordinary text editor can be used without modification using the default values with 'OTF' or alternatively by inserting the relevant QTP commands into the source file. The utility reads the source file from disc and stores it in memory. Therefore there is no need to open the disc or file to be processed. The instructions contained on the disc are clear, comprehensive and effective: underlining, line spacing, width and margin settings are all available and there is even a Vertical option which allows portions of the text to be printed without being affected by the test processor (ideal for tables, etc). This processor is ideal and the simple commands also contain options for new lines, and centering given text, or even given text as a page header (the latter option is only available when page numbering is enabled).

The eighth item on the disc is the QSDM item which is a small machine code monitor type program which allows memory locations to be examined or altered, both ASCII and hex dumps of memory are taken for and the instructions are short, simple and to the point.

The final two facilities on the disc are TERM and PROMPT.

TERM allows the use of an RS 232C terminal connected to the DRAGON 84 through the RS232 port. The facility enables you to input a desired baud rate, and also displays a list of 14 baud rates from 50 to 9600 if the baud rate is changed. PROMPT allows the changing of the standard FLEX prompt ' + + ' to any user defined string of up to three characters. This is useful for marking special system discs that have been configured for a particular application. The routine also changes the FLEX '777' prompt to match the new user prompt.

Ten on the disc, therefore, are utilities of varying quality and usefulness, and clearly designed for FLEX users who must be serious about their Dragons to have FLEX at all, and must pay at 50p per item the well worth the expense and add these utilities to those already available under FLEX DOS. As one would expect from Roy Coates the instructions are lucid, the programs are well written and the descriptions of the routines difficult to follow. If you are running FLEX then an investment of 50p per 50p for postage and packing is one of the best you will make this year. I would reiterate: please do not forget the 50p as clearly Orange Software are charging very modestly for the disc and each 50p does make a difference to their profit margins.)

Genie in a bottle

Product: Allotek, 1000s re-linking

Price: See last month's Newsletter

Supplier: Allotek, 4, Market Crescent, Epsom, Surrey TW20 3AF.

I sent one ribbon from my Tan-

My OMP 105 frame is ageing rather this year. It was returned to me about three months later, but did not use it until the ribbon in current was needed replacement, a month or two later. The ribbon had plenty of ink, and it was necessary to put the printer on Autolife when momentary clear the excess. Except for one or two fainter parts, where the ink-removing appeared to be incomplete, the results were reasonably satisfactory.

HOWEVER, one day the printer hung up halfway across the page. Taking it off line and switching software again appeared to remedy matters, but so ... it happened again, and again. I suspected that the head had become glued up with surplus ink. Just as the defect was caused by the very own ribbon. The printer pins were penetrating the ribbon. Taking the head off line and carefully removing three-inked ribbon, I inserted a brand new one, and had no further trouble. Also, a friend of mine who had the same problem managed to break one of the pins which led to remove the head from the ribbon. After head was removed, the ribbon was found to be a satisfactory job, my conclusion is that using pins in the ribbon is false economy.

R A Davis

Not recommended by reviewer

PH penetration can happen with any word label ribbon. But some permanent ink cause failure to not faster, making the problem worse.

Supposed to shift your space

Program: Discop (utility)

Price: £3.00 (inc p&h)

Supplier: Puler Software, 36 Fossil, High-Crompton, Shaw, Cleitham OL2 7NQ

ONE of the problems encountered when changing from a tape based system to disc storage, is that tape based programs that use the first page of graphics memory will no longer

run. This is because, with the exception of Delux, the disc controller takes data over to use all work space. Of course the controller could always be 'upgraded' when you want to use disk programs. However, this involved disturbing all the controllers would do the controllers no good at all. A better idea is to effectively detach the Discop software switch (as was published in DU many months ago). Alternatively to shift the disc workspace to a position where it is unlikely to get in the way, and this is precisely what Puler Software has set out to do with Discop. With Discop installed the workspace starts somewhere above 0000. This means that not only will programs that need the first page run but the disc is still usable. In fact Puler claim that using Discop, 'nearly all graphic programs will run'. In fact I decided to put it to the test first. Imagine being able to play Jet Set Willy without having to remove the controller. I seemed to be able to write a test program to test the disc. I found the program I chose for my test (Johns-More, Jet Set Willy, Air Force and Superkid) after failed to load with Discop installed or loaded then crashed when run. However, my biggest disappointment came when Paul Wick's Block 24 semigraphics, published in DU October 88, also crashed.

In short it would seem to say that if Brian Cadge's Disc Detect program didn't help, then Discop isn't either. Two sources of irritation were that it was necessary to load the program then wait for the disc state to step before typing so on. Failure to do this meant that the disc ran continuously. Secondly the system obviously interfered with the error routine. In every error was reported as an I/O Error, no matter what the cause. The first of these is easily overcome using a short basic program feature a delay via the TRAP command. Indeed so simple is it that I can't understand why it was not included on the disc. After all, DRPCUP looks a lot more professional than the method used. The second problem is a good deal more serious; all you will really know is that an error has occurred. As to what sort of error, it will be guesswork.

Where this system does

score is that when a program does run, the disc controller used. This means that un-protected programs, in those printed in DU which poke the graphics pages to achieve their display, can now be stored on disc without alteration. If you have used that type of software then Discop would be a worthwhile investment. The price means that you have not got much to lose. Discop runs only on the Dragon II or an upgraded 32 and is available for Dragon-Dos or Super-Dos 85.

Rev G. Smith

Good for an old 'un

Program: Blast Out
Supplier: Dragonfire Services,
13 Mary Jones Close, Baines, Grant

Price: £3.00 + 50p p&h

OVER the past few months there have been a few good, new and fairly original games released for our computer. Here we have Blast Out, which adds a little new way to another close of the costly arcade favourite Street Out. With games like Lucifer's Kingdom around, surely Blast Out clones seemed to collect their old age penalty?

Just for those of you who have never seen a version of Blast Out, then tonight somebody out there here's a brief synopsis. You play a bat, a simple cartoonish figure which stands along the bottom of the screen. You have a few objectives in life and that is to shoot yourself into death with a bouncing ball. If you do this correctly the ball will fly back up the screen and into a shelf which will knock down some bricks. You must not destroy all the bricks or coloured bricks before losing your allotted bats.

Well that's the outline of the game but what about extras for the 128K version. Graphics-wise you can hardly expect them to be at precision detail, a bit, a bit and a bit more. Well, not exactly need intricate hi-res graphics.

Blast Out looks like good as it probably could do with multi-coloured wallpaper bricks.

Dragonfire have done fairly well with extra features where they have had a chance. Firstly you don't press the start button to see the ball start whizzing around, there are speed levels to choose from - with a bonus to pick from there must be one to suit your level. If though even you're too fast you can choose the size of the bat with a bonus that ranges from the quite hefty to minute where the bat is only slightly smaller than the ball.

Mostly you change your weapons but you can alter the brick sizes that you can either slowly chip away or break out great wedges. Other extras include the option of 1 or 2 players, joystick control, stealable ball and extra lives.

Also there is even a burst of music when each thousand points have been clocked up which is quite pleasant. Movement is smooth, fast and to my knowledge bug free at all adds up to an addictive game.

Instructions are comprehensive, printed on three sides of A4. One analyst important factor of the instructions are that it tells you all the levels and bricks. Although you realise that after one game, when I've loaded up I've often forgotten and have played so many games where no indication is given. Despite being well explained I still don't really know the instructions that don't come in the package box because they stand a chance of getting lost.

There's just one irritation in the game when the bat gets stuck behind the back of the screen for a short time before it will reappear. You can't see it until you reappear. I've actually only seen it play once after an update of Blast Out for the Dragon 128K and it's by the better. As a version of Street Out it does everything that can be expected. As for the rating I feel that it deserves given a 3 out of 5. Dragonfire has an excellent product and excellent sales.

Siege!

Richard Boryna assaults walls with a mangonel

THIS is a relatively simple, additive program that involves controlling a giant medieval catapult, the mangonel. Your job is to bombard a walled village. By altering various values it is possible to alter the flight path of the rock hurled, hopefully to land it on top of some poor, unsuspecting villager's hut.

When the program is first run, you will be asked if your Dragon can cope with the infamous PC-BIOS/MS-DOS/TTY/tty/can't the program isn't that stupid? There will then be a pause so the help page is shown.

On the main playing screen you are given information about the mangonel: current release angle, arm length, number of ratchet turns and rock weight. Also shown are the previous length and height plus a picture of the mangonel (allowing for artistic license). You can alter these values by entering:

RA to alter release angle (between 15-80

degrees)

AL to alter the arm length (between 2 to 5 metres)

RT to alter the number of ratchet turns (between 2 to 5 turns)

RW — to alter the weight of the rock (between 20 to 100 kilos)

When you enter any of the above after the COMMAND... prompt, you are then asked to input a new value. Passwordly within the given parameters or the computer will simply beep at you. After entering a value, the display is updated (watch the mangonel arm after changing the arm length).

There are also three other commands:

F fire the rock

H help

Q quit

All inputs should be followed by ENTER, and if at any time you make a typing error, backspace works as usual and all other mistakes

actually found a version of this program while wandering around a network. Link 4802 Research Machines. I decided that I would write a similar program for the Dragon, a fairly easy task I thought, seeing how archaic the 4802 is. But it does have one advantage over the Dragon: text is hi-res (yes, that one again). This was in fact quite easy to overcome: I simply used DRAW strings to make my own "user-defined" graphics. The parts of the program concerned with this go from lines 1840-1930 and 2000-2530. There is no reason why this routine could not be modified and used by somebody else.

If you can't face typing in this fairly lengthy program (and who can blame you?) then send £2 to me at 71 Cavendish Drive, Wallingborough, Northants NN8 3UP and I'll send you a couple of copies on tape (UK only).

Adventure Contact

Not for the faint

Program: The Castle of Cursed
Supplier: Orange Software,
The Garth, Star Road, Ham-
perry, Aberystwyth, Gwyn
NP23 9D.
Price: £5.95 (+ 50p P&P)

This is another offering from K Hunter who also produced *Shenlock*, though this is definitely not a utility. It is an adventure game operating under FLEX, and utilizes a massive 48K machine code plus a further 10K in the command space. The instructions tell you not to remove the disc as it is used as virtual memory at various times during the game (which is hardly surprising). The disc is not protected so that anyone with a drive can make a back-up copy and use that as a cheat. The only advice is that the game itself.

What of the game itself? There are about twenty characters in the game most of whom move about in their own territories, some of them useful at different stages of the game, and some downright dangerous ones. You are told that you have just come of age and being the eldest living relative of King Lendor's former champion, you have been summoned to appear before the King.

Unfortunately of course the game certainly will cover one hundred and thirty locations and all you are given is a very rough map of the terrain.

Rough it certainly is, especially the Grindle Mountains and the Uncharted territories. The woods, the forests and the Achadri floor do nothing to change the definition. The game has a large vocabulary and it is well worth trying alternatively to guess a word, or to use the command as such is unimpressive, but powerful because once you get into the hours do really.

Along the way you will meet a drunken dwarf, an innkeeper, a goblin, a wizard that keeps changing form, an elf, a knight and if you are very lucky, the King, but you will have to deal with a spider, an evil basilisk, a megaspider and a dragon. You may not be useful in a certain situation and if you are you will get killed. However, if you are lucky you will be rewarded with several times, first rewards, make use of nature's products to aid you along the way, and the rewards will have to cross the inevitable river. So that's not quite any more clues. This game is definitely not for the faint hearted and if your spouse will talking to you when you have completed it then you will have better than I did.

DL M Newton

Not so mysterious

Program: Shenlock
Supplier: Orange Software,
The Garth, Star Road, Ham-
perry, Aberystwyth, Gwyn
NP23 9D.
Price: £5.95 (+ 50p P&P)

Shenlock is not, as the name might suggest, an adventure game by the traditional occupant of the disk drive, but a complete case 'detective' written by K Hunter which operates under FLEX. It operates by using an anti-sector buffer which is read from the FLEX sector buffer, and if required written back to drive after editing. Changes to the sector buffer will not affect

the disc unless the Write command issued. This buffer is read from the display track and sector by sector. All other programs use track and sector but not all of them update the Shenlock buffer so certain of the Shenlock programs and recovery from disc errors may require information in the displayed buffer that does not match the shown track and sector.

This sounds very confusing indeed (you don't say, I don't) when actually in use. If however there is any doubt, use the Read command to update the buffer shown on the screen. There are five main functions,

Analyst, Director, Inspector, Searcher and Tracker (Searcher and Tracker always enter Shenlock showing the correct buffer contents.)

Shenlock will only allow the use of the disc drive for 100K. It will permit commands in upper or lower case. The commands themselves can be what I shall call mnemonic what the instructions call functional. The normal commands are single letter alpha commands of the arrow keys, play/pause, and break, and Escape. These commands will change the drive number, set the sector information displayed, enable the Help information display, update the current disc format information, toggle the screen display between hex only and ASCII, read into the buffer the next logical sector in a file, get contents of the sector buffer to an online printer, and so on. The internal Shenlock commands are control keys X called by pressing Clear and the appropriate key.

Large!

Program: Utopia
Supplier: Pulse Software/OS
Facult, High Compton, Oxon,
Oxford OX2 7HQ
Price: £5.95

MANY years ago, your ancestors constructed an ideal world. It was necessary to construct an elaborate defence system to 'keep out all influences'. However, the place has fallen into disrepair you begin to wonder whether this defence system was devised to keep you in. This is the scenario of *Utopia* from Pulse Software, a game so large that the disc version requires 48K space once cleared down to bytes.

The idea is that you should pilot your spaceship through a maze, avoiding both solid objects and the pitiless (harmless) diabolical ships which steal a random course. Your ship is equipped with steering and laser only. There are five stages to complete, each of which presents its own special problems. Some are very long, so tactics are important, others are very plain difficult.

Graphics are quite good, it is little junk. The ship ships do

Shenlock will allow you to personally customize it to your printer although by use of the LC command will allow you to change formatting to enlarged print or a condensed print.

Overall this disc investigation system compares with such programs as Disk Doctor, and can be used to rebuild directories, to recover files and discs, to edit programs on disc, to change text within machine code programs, to bypass bad sectors to recover lost files, and to verify sectors and discs or even to update files. Altogether the package is a very well put together, the instructions are clear, comprehensible and comprehensive, and I feel sure that it will save many hours of work for those that use it, and compare favorably with the price of almost £20 for similar programs under DragonSoft. This program offers real value at £5.95 (plus 50p postage and packing).

DL M Newton

not usually explode - when it they just disappear.

Personally I found it quite irritating being put back to the beginning of the current stage every time the ship was destroyed. Still, this is better than having your new ship materialize in the same place as the old one, only to be destroyed again. Speed is the key to this game and for this reason I would recommend that you use a self-centering switch-type joystick.

Overall this is a good game to play, which presents a real challenge.

Finally a kind word for those nice people at Pulse. I had a slight problem with Duncan which resulted in a peculiar stock response. Thinking might be a software problem I took up the matter with Pulse. In spite of the fact that my hardware was at fault, a replacement disc was sent by return of post. How that is what I call service, thanks guys. As it turned out it was right and Duncan is feeling much better now.

Ken G. Smith

Write: ADVENTURE

Pete Gerrard goes in search of a role in life

THE straightforward adventure scenario of the *Colossal Cave* variety has been with us for some time, well-known, and has spawned endless variations on a theme. Most, if not all, of the standard adventure games currently available owe more than a few good ruggles to that very first game by Crowther and Woods. That game was originally played on a mainframe rather than a home computer, that it was Scott Adams who really deserves the credit for producing adventure games on (initially) computers with only 10K of RAM, is immaterial. *Zork* followed *Colossal Cave*, Infocom was born, and even if you don't like Scott Adams' adventures at least you have to honour him as having got the whole thing going.

Over the years a few changes have been made to the standard adventure setting, without radically departing from the main format. There is something of a quest involved, communication with the controlling computer is via a 'parser' of varying degrees of intelligence, and although graphics played no part in the original game some companies (and seemingly ALL distributors) insist that a game these days *must* indeed come supplied with graphics. We've argued that point often enough in the past not to bother with it again.

Or Thorins

In the last couple of years, though, some major additions have been made without altering the setting to any great degree. The principal of these is the emergence of what some companies refer to as 'pets'. These are characters who follow the hero (i.e. you) around, and behave in an artificially intelligent manner. Some do add greatly to the fun and humour of the game, others seem only to bother because other games also feature them. Sometimes they are necessary for the solving of the quest and must be told to do a variety of things, others just wander around, occasionally getting in the way and coming out with a few witty comments.

The second major change was to introduce an element of role playing, of the *Dungeons and Dragons* variety. This is an interesting cynical point, because *Colossal Cave* was originally spawned from a desire to play *Dungeons and Dragons* on a computer, without the tedium of all the hand drawn work that has to be done to look after and control a standard D and D game. To replace the traditional *Dungeons* master, in other words, the man or woman who directs operations and relays to the human players information about their surroundings, strengths, opponents who are waiting to fight them, and so on.

A brief review of the so-called 'arcade adventures' can be more or less dismissed

as having nothing to do with classical adventure games. They owe a lot more to arcade than adventures, which is not to deny the fun that can be had from playing them. I just wish they'd called them something else. No, the real adventure progress has been from *Colossal Cave* to the heights of *Infocom*, the addition of 'pets' and the re-introduction of role playing as a major part of the game.

Two main roles

This role playing aspect can take many forms, and it is these that we shall be considering for the rest of the article. Generally speaking, there are two main types of role playing game, at least so far as adventures go. There can either be one player, whose

given to the attributes very widely.

Nevertheless, strength is usually one of them. A person's strength is obviously of great importance in determining whether or not various problems can be tackled. These attributes are often rated on a scale of 1 to 6, or worked out as a percentage with the higher number indicating (in the case) the greater strength. A strong player might be able to lift a heavy object that would be beyond the power of a weaker one, or two or more players may combine forces and lift the object together. As a result these attributes may change as the game progresses. If the player goes a long time without food or water, for instance, then the strength would undoubtedly decrease. On the other hand, a hearty meal would soon send it soaring again.

Another common attribute is usually always stamina. This governs a player's ability to carry on when all accounts are dropping like flies. He would be able to persevere for greater lengths of time without food and water, he would be able to engage in combat for longer than a player of lesser stamina, he would be able to make greater journeys and suffer less fatigue, and so on. By the way, 'he' is used to save me repeatedly typing 'himself'. I have no wish to offend Helen 'The Player' Armstrong, for example.

A third attribute that is usually seen in one form or another is dexterity. This covers many things. A dexterous player would be able to spot an exit with ease, whereas a clumsy one would trip over a matchstick and fall headfirst into a trap. Similarly a dexterous person would be better equipped to, for instance, make a fishing rod out of a snapper's ear, a needle, and some thread. A clumsy person would make a mess.

Also in them, and considered as one of the most important attributes of all, is intelligence. This can be used in subtle combination with any or all of the other attributes. An intelligent person may think of making a fishing rod as described above, but lack of dexterity might prevent him from doing so. A dull person with high stamina would plod on for miles and miles, an intelligent one with low stamina might look for something to eat. This subtle interweaving of attributes is of great interest in games of this genre.

Courage in fashion

The other two of the six seen in very few games to game, although courage is often to be found in some sort of fashion. A player of great courage would think nothing of attacking a malevolent orc with a matchstick, but a cowardly one would probably run a mile, if he had the stamina.

The final one of these six is definitely up-

attributes change according to the progress made or more usually the lack of it, and this is more in line with traditional adventure playing a single player, alone or with friends, doing battle against the problems set before him. Or, and this type seems to be increasing greatly in popularity at the moment, the player actually takes no part in the game as himself, but is instead in charge of a party of four or more individuals whose actions he has to control in order to get them to solve the mission set out before them. We shall be looking at both types.

Before looking at the differences, let's take a glance at the similarities. Chief amongst these is that each person in the game, whether alone or in a group, comes equipped with a set of attributes which to a greater or lesser extent controls that person's performance. These are usually based on the original *Dungeons and Dragons* format, where six attributes were assigned to each member of the game. However, times change, and although they may still be based on the original design the names

to the individual, and as one example we could have a magic attribute, the ability to cast magic spells, wizards and magicians working their way up the spell ladder would start off with a relatively low magic attribute (perhaps just the ability to cast a fire spell, or something) and gradually go up in power as they gained more experience. Experience itself is often an attribute but I'll stick to magic.

So, you might think, why not just start off your game with either the individual character or the entire group having maximum values for each attribute? Ah, life is never that easy. The numbers 1 to 6 are used because attribute values were sometimes determined by the throw of a die. The average number on each dieface is 3.5, 3.5 times 6 gives us 21, and so one popular rule is that to play you must start a game with a total attribute value greater than 21. Sometimes the program decides randomly, sometimes the player is allowed to choose, and in our actual example listing

it is left up to the player to name each character and then set the attribute values.

In this example just two players are used,

it could easily be a party of four or just one on his own. By going somewhere in the middle you should be able to see what I'm on about.

The data statements at the end, in lines 1000 and 1010, contain the names of our chosen attributes. The array for holding these, and the attribute values, is dimensioned in line 40 and the values read in by line 50. The characters are allocated names in lines 70 to 100, and after some information in lines 105 to 180 the actual attribute values are input by the player in lines 190 to 250 and checked in lines 250 to 280. (Provided it's all a well as reach a successful conclusion in line 270, and then the data could be defined away or kept ready to start the game proper.)

Role playing games, or RPGs, are a fascinating development on the traditional adventure game. There are a number of dedicated magazines available on the topic, and it is one that we shall be returning to next month.

By the time you read this, the wretched postal dispute will (hopefully) have been completely resolved. However, at the time of writing it is still very much among us, post boxes are sealed up everywhere, and only the occasional bill is getting delivered. This is alarming, not least of the many reasons being that next door's dog has now failed to eat a postman for several weeks, and is looking alarmingly fat; it is turning its attention towards Dragon User contributors. If anyone living in the zone in or around Wigan notices a bearded chap with shoulder length hair, glasses, wearing a denim jacket and scuffed denim jeans, holding painfully and with blood dripping from an open wound while carrying a jiffy bag bearing the name Helen Armstrong, you'll know it's me.

Golden oldies

So, in the absence of any postal contributions, I've decided to look back over all the queries that have flooded in over the years to the Adventure Trail, and reflect on a goodly dozen of the older games. If you've solved them all then you either wrote the letters or you're smart Alex who deserves to have Blady the robot come round and

beat you up.

The files that I have, both my own and those inherited from my brother Mike, go back to 1985 and beyond. The first thing I

found, though, was dated 8th Feb. 1986 and was connected with the original Colossal Cave adventure. Attached to the letter was an unbelievable map, drawn by an

unknown hand. Several misplaced spiders could have fared no worse, but presumably it was attached because it also contains the solution to the end game, which is the point where most people appear to get stuck. When you arrive at the end game, after completing a certain percentage of the game and discovering all the treasures, you are in a repository with a NE corner and a SW one. To successfully conclude the game you must move all the rods to the NE corner. The command to use is SW "BLAST!", which is not a rude word but an instruction to detonate some dynamite. If you're carrying the rod with the star, you'll be killed in the explosion. If you're at the NE corner then you'll be killed by lava, but if you're at the SW corner a horde of sheering elves will descend and carry you off in triumph. Isn't that nice?

Five clues

Anyone remember Operation Salsar? The five drudge robot secrets. In part 1, the code is anukky for some (binary). Fairly simple one to decipher, there. In part 2 you are looking for five agents, and the following five clues are supplied free-of-charge to

anyone still searching. 3) You will find one where a seasonal cake comes from. 3) Another may be a member of a University boat team. 3) Another could be at a those new meeting. 4) One more could possibly be a United Kingdom manly. 5) Lastly, one agent might be a friend of Sir Francis Drake. So know you now.

Hints of ice

Someone called Darren Doffery, who lived in Hampshire at the time and may well still do so, seemed to be doing remarkably well on the Ice Kingdom. The following 8 hints are all from him. 1) To get past the bear you must give him the honey by the river in the bee hive. 2) Take the stick he was holding and go south. 3) To get past the snowman on the path use POW! STICK. 4) Take the poles in the castle. 5) When you see the small giant give him the poles in return for a caulet. 6) When you see the peculiar rug type GET RUG. 7) In the armory you will see some tiger heads. Type PULL HEAD and a sword will appear. 8) The boat on a pedestal in the garden lake is a red herring. The real one is in a cave. Take this and you have completed the game. Oh, words of nostalgia.

Let's go back in time to the heady days of Salamander software selling copies of games. Wings of War was a popular one, and to get your pass you need to bring your

the blue panel in order to open it. The black disc is to be found inside the security box which you find behind the red panel. The password is, of course, Franklin. Move the black disc in front of the door to the bridge to open it. Finally, to fly the ship, press the button behind the blue door to start the engines, go to the ship's helm and press the invisible button, and hey ho and away you go.

Word of fish takes us back in time, and to take us into the game you need to take a tip and have about then perhaps you lifted what you need to strike a light and provide a crown for a smoking friend. Only reason, though, will give you past, as it is find what it takes you'll need some inside information. Now you have it, what are you, some kind of hero in a sense, either way the answer is as old as the pyramids! Trapped? Don't be silly, something should ring a bell here, or even shed some light. No clues now, you need a staff in case.

The Thirteenth Seal was an adventure game from the Scottish company Arc Soft-

Examine the wall in the small room. Discover for exploration use D, H, N, H, M, N, U, P.

This same chap tells us that, in the Mountains of Mist, go on of on the ramp to avoid the dragon, and to pass the wall in mist condition you must Carry Wand and

sly Pool in the Mansion of Doom you should catch the mangrove with the open cage, drop the mangrove by the snake, you do not need the candle, the dictionary gives an alphabet, and open sack and drop it to cross sail. So now you know, folks.

When we do actually get some post delivered, Wimeroff's Return of the Ring is always a popular one. Secretly lot, Wimeroff, they give me a solution and then tell me not to publish it. All I can really say is that you have to watch the Great Level of 12 before you can complete the game. Ha, I've just seen something. The Spirit of Exclusion can be used on the squalling mutant to gain the amulet. Wonder what certain landrods would do with one of these?

Lost in space

dictionary, go to the command, and say "Tear". Tear the brackets next to the fireplace to find a car to escape in, and fix the officer's foot with the foot here to get a key to start the car. Look at the flowers in your binoculars to find the switch, and you fix the container by using the wrench and a scrap of aluminum.

Lost in Space was another golden-olde, and to escape from the maze you must walk around and follow the word "Spacehawk" when you find it. You find the blue disc by inserting the white disc into the food machine and eating the pie, then you move the blue disc in front of the door with

walk. This one saw us delving into the slightly murkier parts of the world, and encountering such characters as Cyclops (Three Eyes at this one), Myster (Sing or Dance and you'll soon get past them), Chamele (Three Water), and so on. Amazing the number of adventures that allow you to display hitherto unknown powers: here, you can quite cheerfully strangle a lion! You can also kill a Gorgon if you're wearing your helmet, showing your shield, and wielding your trusty sword. What an unnecessary collection of customers.

What next? Ah, January 1988 and someone from Coventry telling us all about the Caverns of Doom. Use the key found near the skeleton to open the tool chest. Examine the surrounding wall in the eastern area if you want to go swimming. Look under the tent behind water fall if you want to move the raft over deep water. Shoot the target twice, and that sorts him out. You need tools, Hammer, nails, saw, beams and rope to build the raft. Use the umbrella lamp.

Old and new

Maridian (which, on looking at their strange letterhead, I thought for one bizarre moment said Marillion) produced Underbeings of Doom, also in 1985. How do you open the big door? Explore the pit for a useful object. What help is the apocryphal? Talk to her and explore the labyrinth. How do you escape from the top of the cage? Find something to drop into the pit, that's how. How do you leave the underground valley? Search inside the bats and then try and bridge the canyon. Easy, really, do it all the time in Migan.

Well, that's your 12 adventures covered, and my spelling checker and word counter tells me that I've just about reached my monthly limit of 1,000 words. I hope all of the above might persuade some of you to blow the dust of those older adventures that you've neglected for the past 15 years or more, and have another crack at them if you never solved them. Hopefully the postal department will sort out and can get back to something approaching normality next time around. Well, as sometimes we never get, anyway. Until the next time!

outer it turns, or a single player trying to beat his own personal best score. When the fitting is run, the empty grid is shown and the player is given first choice of a letter. This is selected by pressing the appropriate key. It must then be placed on the grid by lining up the two arrows displayed on screen. The "horizontal arrow" is moved by pressing the horizontal arrow key and the "vertical arrow" by the vertical arrow key. Once these are moved to mark the coordinates of the position required, the letter is inserted using the "enter" key. It is then the computer's turn to select a letter. Unlike the original game, the computer also selects and positions its choice of letter in a vacant square. This may make the game that little bit more difficult as the player might find certain words "blocked" by the computer's choice of square when the grid is filled with 25 letters, the player should then total up the score.

The competition this month is one of those rare events that will not necessarily need a computer - so you can give it well-earned rest (unless it is busy playing

E	G	I	A	H
R	A	N	G	E
A	S	I	E	R
H	A	L	L	H
S	T	A	N	L

"Wordsearch"). You will need instead twenty-six squares of card each bearing a different letter of the alphabet. As an alternative, you can use Scrabble tiles instead - just take care of each letter. The object of the competition is to use 25 of the 26 letters in a 5 by 5 grid so as to score the maximum number of points, as follows outlined in the game above. One letter is there (probably a

Q, X or Z) will be unused - the choice as to which this is will be left to you. To enter, copy out your grid and list the component words - remember, no proper nouns, foreign words other than those in regular use in English, or initials and any obscure words should have a dictionary reference added (or a jolly good explanation). The OED will be the final arbiter - (50.). Add up the total score and mark it clearly at the top of the page. Don't forget that any five-letter words will score six points. To prevent the maximum number of points to be scored, we will also allow words to be read from right to left, from the bottom upwards, or in a diagonal, like a wordsearch. For example, on the grid printed above we could also find the words "share" and "leg" (reading upwards), and "all" and "hen" (diagonally). Note that this grid itself would not be valid as an entry as it does not contain 25 different letters - the words were just given as an illustration of the method of scoring.

The winner is, of course, the person with the largest number of words in one grid.

The Answer

This is Gordon Lee's own solution to the September competition - see page 26 for results

ANSWER: The best approximation is found by using the fraction 244562

SOLUTION: We are required to find the simplest fraction which will give a value for π which is accurate enough to measure the earth's circumference to within one inch. It is assumed that the earth is a smooth sphere with a radius of 3960 miles. In the program, lines 100 to 120 calculate the correct value of such a circumference using an iterative algorithm to an accuracy of 12 decimal places. Anything with a greater accuracy would be beyond the normal arithmetic accuracy of an eight-bit micro. This circumference is converted to inches and is stored as variable C.

We are looking for a simple fraction with a numerator (N) and a denominator (D), both of these values being as simple as possible. The square root of the square root of this value should be an accurate representation of π , so the fraction itself should be approximately equivalent to π raised to the fourth power. If X is denoted as this value, then $N/D = X$, or, put the other

```
100 P1=3.1415926535897
110 C=D*P1*3960*2
120 C=C*63360:REM Convert to inches
130 X=P1*P1*P1*P1
140 D=2
150 N=D*P1*REM Calculate Numerator
160 M=INT (M+0.5):REM Round to whole number
170 Z=800*(5000/M/50):REM Approximate value for pi
180 B=Z*2*3960:REM Compute approx. circumference
190 S=B*B*63360
200 DIFF=ABS(C-B)
210 IF DIFF<1 THEN PRINT M;" / ";D:END
220 D=D+1:GOTO 150
```

way round, $M = D * X$, it is using this formula that line 150 calculates possible numerators. This is done by taking a sequence of denominators, commencing at 2 and finding the related numerator required to obtain an approximation of X. Now, the question requires this value to be a whole number, so the computed value is rounded to the nearest whole number (line 160). We now have a possible pair of values for both

the numerator and the denominator, so we use the line 170 to find Z, our approximation of π . This value is then used to calculate the number of inches in the circumference of a circle, radius 3960 miles. The difference between this and the value from line 120 is computed. Use the ABS (absolute) command to get a positive result. If this is less than 1 the numerator and denominator are printed.

Classified

DRAGON 32, data recorder, Brother HRS printer, joystick, nearly 250 tapes, books and magazines. £500 OHO. Contact Mr. G. Roberts, 76 Applewards Lane, Handbridge, Cheshire CH4 7DT.

DISC systems from as low as £110 (interface and unused drive), also cartridges, DOS conversion Rares, drives, disc cartridge parts and kits. Please send your address in capitals.

with two loose stamps, for Pro-Tech Systems (ES), 25 Pelican Place, Pimlico Heath, Basingstoke, Hants RG26 6DN.

CLEARANCE Inside the Dragon, last few copies, £5. OS-4+, Basic80+, ASM+, C+, Syngraph, RMS+, Dynamic £200 (all not up). Send SAE for other software list to Parnicom, Ltd., 21 Wycombe Lane, Watnum Green, Bucks HP10 9DZ.

HOW TRADITION SHAPES US ON A PC

strictly for various users of BSA4000 FILE and 00-9. You PC-8000 supervisor need for the PC or compatibles (eg. Astound 201) lets you run FILE and BSA4000-00-9 using the PC's screen, keyboard and disk drives. FILE and 00-9 can even use the PC's hard disk. DOS, FILE and 00-9 can all be active at the same time - just switch to the one you want to use. Transferring data between DOS, FILE and 00-9 is easy and fast. You can use PRGMS to format diskettes directly in the PC's drive and there is an optional address disk controller which lets you use existing address disk drives. MORE on the details.
